

Enabling Grids for E-sciencE

Grid Accounting & Monitoring

*Carlos Fernández Sánchez / CESGA
Grids & e-science, UIMP, June 2009*

www.eu-egee.org

- Objectives & introduction
- Monitoring tools
 - GSTAT
 - SAM
 - GridICE
 - Regional Nagios
- Accounting tools
 - APEL
 - EGEE/WLCG Accounting Portal
 - CPU Normalization
 - Storage Accounting Portal

- **Monitoring**
 - Who is doing what?
 - Sites properly configured?
 - Jobs running correctly
 - sites/server down. How much time?
 - How many resources are (not) available?
- **Accounting:**
 - Who is using the grid (user/VO)?
 - How much is the grid used
 - Which computational resources are used?
 - How much time jobs wait in queue before running
 - Are computational resources enough?

Monitoring vs. Accounting

- **What is “Monitoring”?**

“Job Monitoring is concerned with the instantaneous job status on the grid, e.g., total number of jobs currently running per V.O.”

Not only jobs, but other metrics like site availability

- **What is “Accounting”?**

“Accounting concerns information about completed jobs on the grid, e.g., the total amount of CPU used per VO per month”

- **“Monitoring” vs “Accounting”?**

- “Monitoring” -> grid status “photo” with minimal delay
- “Accounting” exact resource use until now. No data should be lost. Historical view, some delay is acceptable (1 day)

- **GSTAT**
- **SAM**
- **GridICE**
- **Regional Nagios**

GSTAT

<http://goc.grid.sinica.edu.tw/gstat/>

Checks BDII information every 30 min.

- Stores results in DB
- Metrics graphs & stats by time:
- CPUs Sum/free
- Running/waiting jobs
- Available/used storage
- Jobs by VO

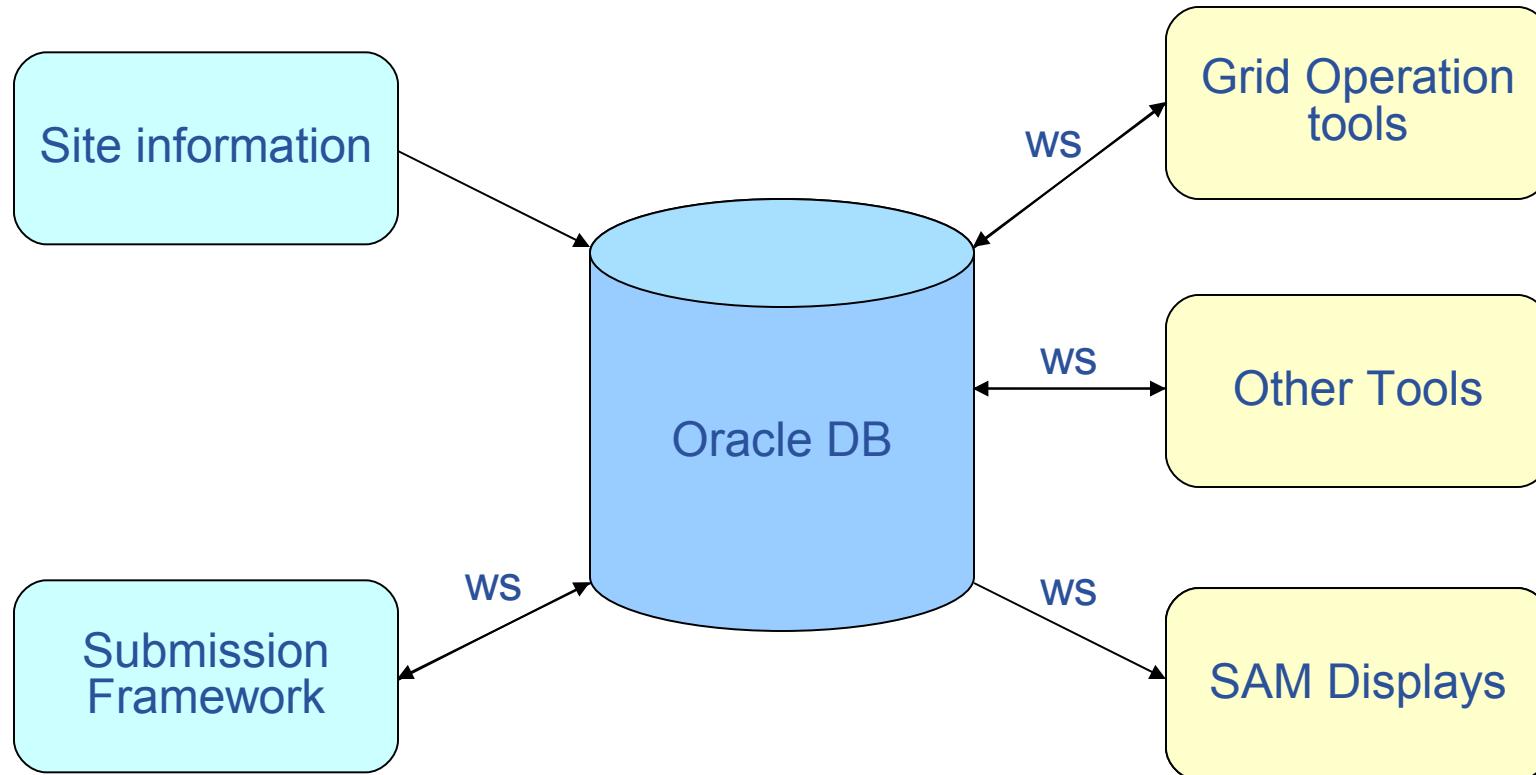

Global stats

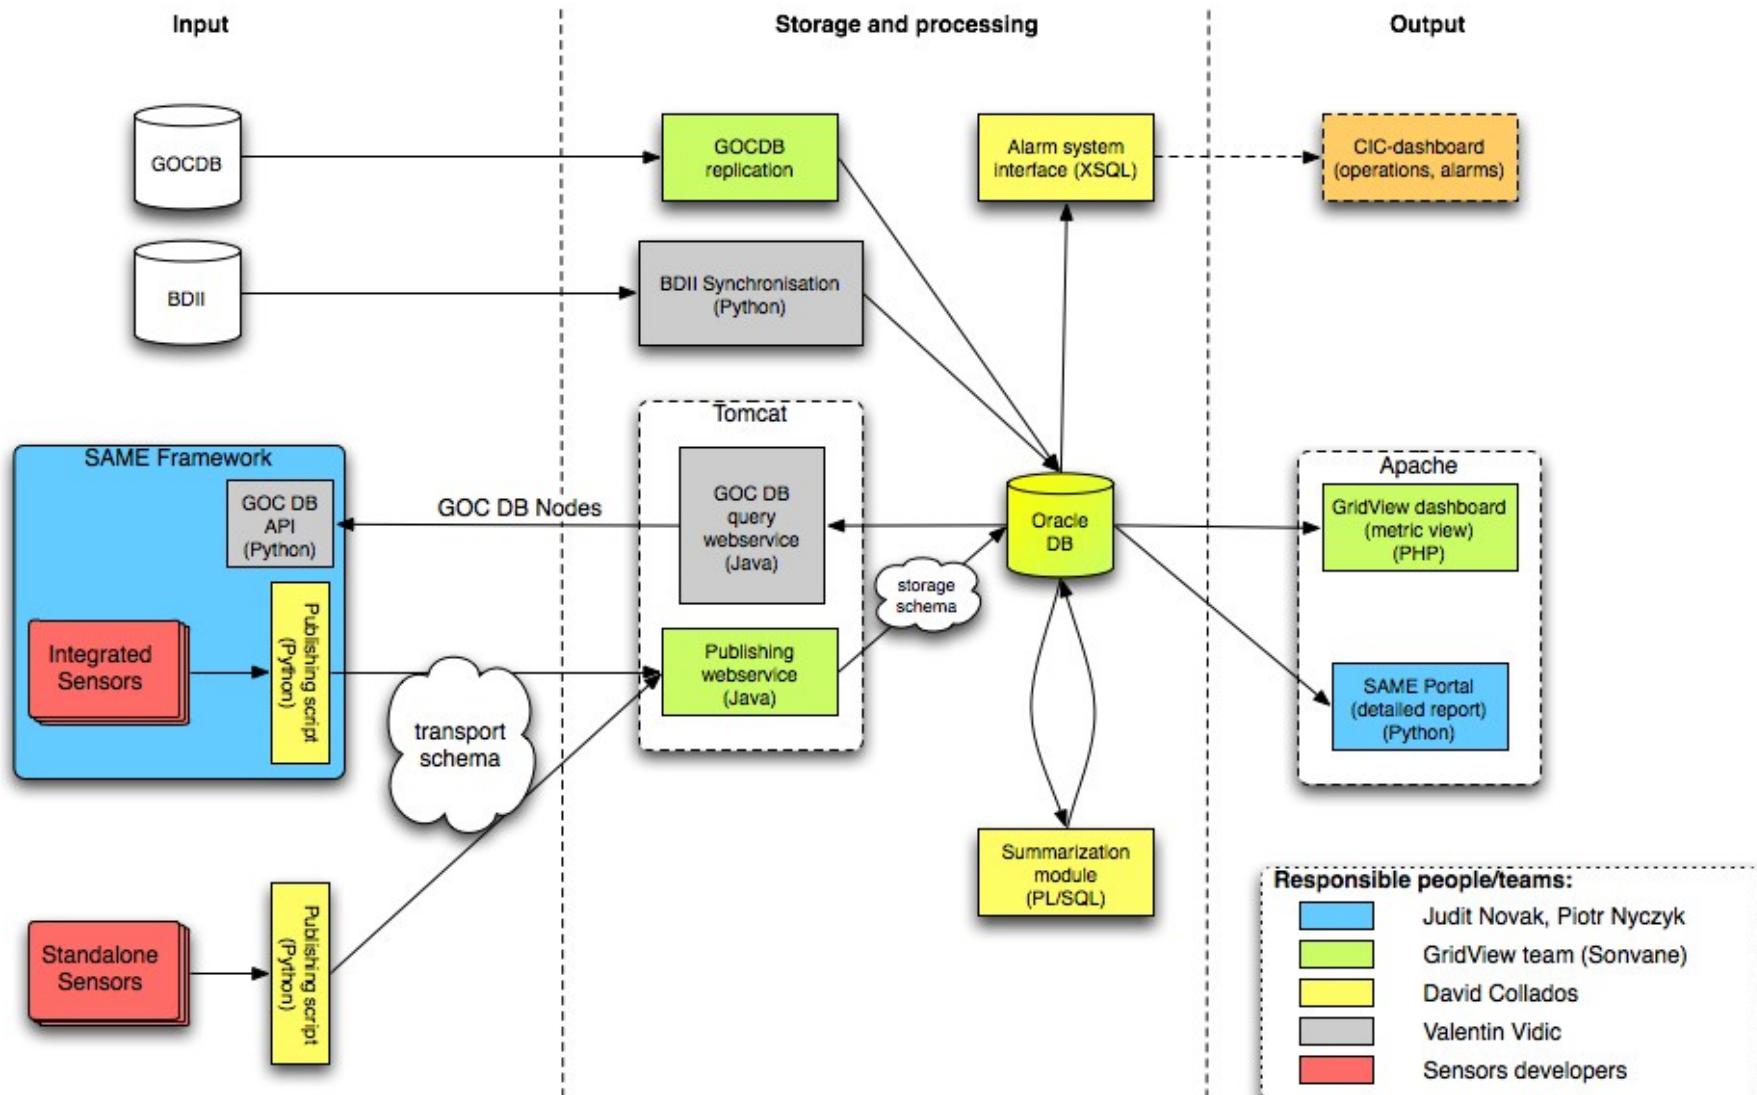

- # Sites
 - # CPUs
 - Storage

SAM

- EGEE: <https://lcg-sam.cern.ch:8443/sam/sam.py>
- Int.eu.grid: <https://sam.cyfronet.pl/i2g-sam/sam.py>

- **SAM = Service Availability Monitoring**
- Platform to monitor all the services WLCG/EGEE: BDII, SE, RB, LFC, FTS, SRM, etc.
- Most of the sensors run remotely
- Availability (and functionality) of services is checked with tests in every site
- Nothing has to be installed in the monitored systems
- Certificate needed to access SAM Portal
- Tests are sent every hour

- **CE, gCE:**
 - Jobs submission, certificates, middleware version, replica management, experiments software, ...
- **SE, SRM:**
 - UI file storage (*lcg-cr*), UI file download (*lcg-cp*), file removal (*lcg-del*).
- **LFC:**
 - Directory list (*lfc-ls*), Store a file in /grid/<VO>
- **FTS:**
 - Check FTS publishing to BDII, ...
- **RB:**
 - RBs job submission, waiting time to find a CE suitable for a job

Generating JDL file:

```

Executable = "/bin/sh";
Arguments = "-c 'tar xzf testjob.tgz ; export SAME_WORK='pwd'/work ; bin/same-exec -c same.conf --nodetest testjob ce2.egee.cesga.es -- CE-1190283561 lxdpm10
StdOutput = "testjob.out";
StdError = "testjob.out";
InputSandbox = {"testjob.tgz","same.conf"};
OutputSandbox = {"testjob.out","testjob-results.tgz"};
Requirements = other.GlueCEInfoHostName == "ce2.egee.cesga.es";
RetryCount = 0;
ShallowRetryCount = 3;

```

Submitting a job

GridICE

- EGEE: <http://gridice2.cnaf.infn.it:50080/gridice/>
- SWE: <http://www2.egee.cesga.es/gridice/>

- NAGIOS based
- **Low level adquisition***: LEMON to get metrics
- **Publishing service***: collector node (usually SE or MON)to send LEMON information to the EXtended GRIS
- **Discovery and high level adquisition**: based on the BDII stores information in a **RDBMS** (*postgresql*) to analyse and show.

*only needed to publish extended information

SouthWesternEurope Federation - GridICE - Grid Monitoring Service - Mozilla Firefox

Terminado

Regional Nagios

- **Provide site admin-centric monitoring**
 - simplify grid resources operations
- **Enable better resource availability**
 - issue notifications as soon as problem appears
- **Achieve complex sensor's dependencies**
 - enables problem isolation
 - only relevant notifications are issued
- **Visualization & management interface**
 - grid resources status
- **Report generation**
 - availability, problem history

- **Open source monitoring framework**
 - widely used & actively developed
- **Host and service problems detection and recovery**
- **Provides wide set of basic sensors**
 - easy to develop custom sensors
- **Centralized vs. distributed deployment**
- **High configurability**
 - service dependencies, fine-grained notification options
- **Web interface**
 - status view, administration

Regional Nagios Interactions

Interactions between EGEE Operational Monitoring Components

- **Grid sensors**
 - Security facilities & services
 - CA distribution, Certificate lifetime, MyProxy, VOMS, VOMS Admin
 - Monitoring & information services
 - R-GMA, BDII, MDS, GridICE
 - Job management services
 - Globus Gatekeeper, RB, WMS, WMProxy, Job matching
 - File management services
 - GridFTP, SRM, DPNS, LFC
- **Sensor hierarchy**
- **Automatic recovery**
 - both local and remote services
- **Certificate based authentication for the web interface**

ACCOUNTING

- **Accounting AFTER event (APEL)**
 - Data is obtained after job completion
 - Full resources usage is stored
 - Pay per use and billing services oriented
- **Real time accounting (DGAS, SGAS, GRATIA)**
 - Incremental resource usage during job execution
 - Balance reduction
 - User quotas can be applied
 - Pre-paid services oriented
 - Example: pre-paid mobile phone card

- Jobs Accounting from each site
- Sent to a central repository (R-GMA)
- Data collection

- Based on Open Grid Forum's Usage Record Working Group

- Each site publishes a ***GlueHostBenchmarkSI00***
- Homogeneous Sites:
 - No problem
- Heterogeneous Sites:
 - Configure the values of usage scaling in each node to set weights to each node
- Problems:
 - Usually, the sites don't take care about whether the *SpecInt2000* is correct or they don't establish the usage scaling factors
 - Now *SpecInt2006*
- Formula:

GlueHostBenchmarkSI00

$$\text{Normalised_Cpu_Time} = \frac{\text{SI2000_Reference}}{\text{Base_Cpu_Time}} * \text{Base_Cpu_Time}$$
