Real time monitoring of the computing systems

In the link below you can see in real time the number of jobs being executed or the number of jobs that are in the batch queue system as well as the work load percentage of Superdome, HPC320, HPC4500 and Cluster SVG computing systems.

Systems status

Annual usage statistics of the computing systems

The evolution of CESGA computing servers is collected in the following pages. Here, you can check, for each year, the number of jobs, job average waiting time, the distribution in scientific areas and in institutions, and number of researchers.
